Information within sight

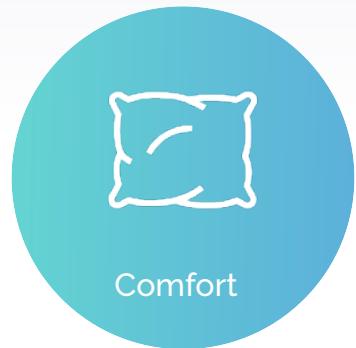

Get Your Way

We have **redesigned** connected glasses to offer **innovative solutions** in industry and bring **assisted reality** to businesses.

Our mission

Comfort

Security

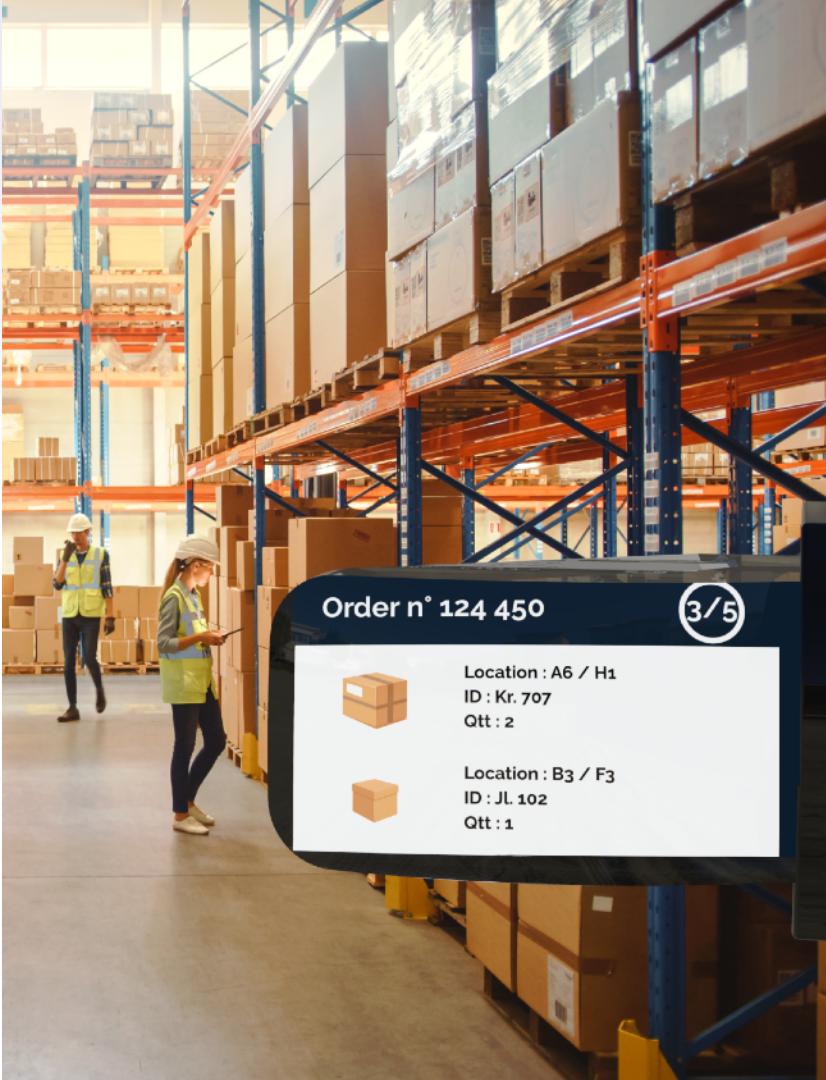

Efficiency

Improving **working conditions** in companies thanks to **connected glasses**

What's assisted reality ?

Assisted reality (aR) consists in displaying working information in the user's field of vision.

aR allows to **free the hands**, to **digitalize** the working processes and to improve the **comfort**, the **security** and the **efficiency** of the user.

What is **not** assisted reality ?

Assisted reality is **neither intrusive nor immersive** in the sense of other XR technologies (augmented, mixed or virtual reality).

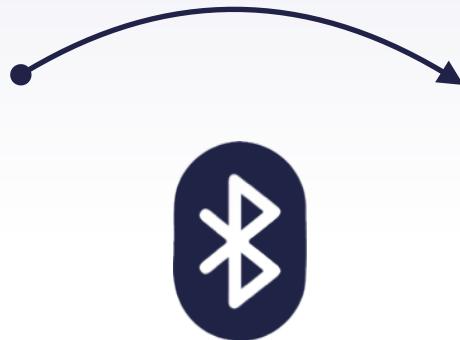

aR allows the user to stay focused on his tasks while having the information in sight.

Our solution

Any
external
device

Simple
Bluetooth
interface

aRdent

Our solution

Make
work easier

Lower the level of qualification required to perform a task

Deploy
quickly

Integrate with existing solutions without additional requirements

Improve
working conditions

Free up hands to improve comfort, safety and efficiency

Use case: Laboratory assistant

The operator follows a procedure and records his manipulations directly. Improve efficiency and minimize errors

Water quality - Client 12xf

Sample :	5/46	Comment :
1st measure :	<input type="text" value="6.5"/>	The pH of the samples must be measured by both methods.
2nd measure :	<input type="text"/>	A pH difference of 0.5 between the measurements is considered
